

# Miss Confidential

## WEBFONT GUIDE

**Please note:** webfont usage is not included in Creative Market's standard Desktop licence - you are only permitted to use the webfont if you have purchased the webfont license!

*Keeping it smooth....*

The Miss Confidential webfont is based on the Smooth version of the font. Holding a lot less points on it's outline, it is over 50% smaller in size and in a web environment will use significantly less bandwidth. If you would still like the Regular version for your webfont, please drop me a line and I'll send it to you!

### HOW TO USE THE WEBFONT

The Miss Confidential webfont kit consists of the following files to accommodate a wide range of browsers

- **missconfidential.woff**
- **missconfidential.woff2**
- **missconfidential.eot**

Copy these 3 files into the same folder where your CSS stylesheet is located.

Add the following code to your CSS stylesheet to configure the font

OR

Copy the provided **missconfidential.css** file into the same folder as the font files and add the line

```
@font-face {
  font-family: 'MissConfidential';
  src: url('missconfidential.eot');
  src: url('missconfidential.eot?#iefix') format('embedded-opentype'),
        url('missconfidential.woff2') format('woff2'),
        url('missconfidential.woff') format('woff');
  font-weight: normal;
  font-style: normal;
}
```

```
<link rel="stylesheet"
href="missconfidential.css"
type="text/css"
charset="utf-8" />
```

anywhere in between the **<head>** and **</head>** tags of your HTML document. Remember to change the path of the css file if it is not in the same folder as the HTML.

Use **font-family: 'MissConfidential';** in the CSS selector where you want the Miss Confidential font to be used
